Headquarters

STAT
Dear [redacted]

After receipt of your recent memo of 23 September pertinent to your Suggestion No. 77-489, subject: Improving Utility of Headquarters Building Space, we sent your request for clarification to the Director of Logistics.

As a result of added study and reexamination by senior Office of Logistics officials, and especially those concerned with the responsibility for planning and implementing future space requirements, the Office of Logistics has now responded as follows:

"Please advise the requester that his suggestion was considered as a possibility in solving our current space problems, including those related to recent community reorganizations, and was not considered to be appropriate for that purpose. That is not to say that the suggestion will not have merit in addressing future problems; but, again, it is not considered appropriate for those we presently face."

You will recall that in their previous evaluation OL stated that should space requirements arise in the future for which this suggestion appears to be an option they would ensure due consideration of this suggestion. We are confident that OL will have a copy of your idea on hand for a future reminder in their planning. However, so that we may be sure that the concept you have keeps on top of pile, we have suspended the file for about eight months. After that period, we will reopen the case and again send it to OL for reexamination and current consideration. Should you see anything happening around the corner before that time which would seem to represent some aspect of your ideas, please give us a call.

Sincerely,

[redacted]
